Project Proposal:

Evibe - Advanced Event Management System

Abstract

Evibe is an innovative event management system designed to connect event organizers and attendees on a single platform. The project aims to address the challenges of event discovery, management, and engagement by offering intelligent features such as secure online payments, interactive maps, and real-time notifications and sending receipt to customers. By streamlining event organization and participation, Evibe enhances user experience, increases accessibility, and simplifies the event management lifecycle. The final product will be a fully functional platform with robust features, providing seamless event management for organizers, attendees, and administrators.

Project Overview

3.1 Objectives

- Simplify event creation and management for organizers.
- Provide an intuitive platform for attendees to discover and book events effortlessly.
- Enable secure and convenient online payments.
- Offer real-time notifications , confirmations and reminders for event updates.
- Provide administrative control for managing users and events effectively.

3.2 Scope

- A web-based and mobile-friendly platform for event management.
- Support for event creation, booking, and feedback management.
- Secure and diverse payment gateway integration.
- Interactive event location maps and filtering options.
- Dedicated dashboards for organizers, attendees, and administrators.
- Basic chatbot integration to assist users with event inquiries.

Functional Requirements

For Organizers:

- Create, update, reschedule, or cancel events.
- Set event details including name, date, time, ticket type, and images.
- Monitor ticket sales and attendee metrics.
- Manage user feedback and engagement.
- Access a centralized dashboard for event oversight.

For Attendees:

- Search for events by date, time, category, or location.
- View event locations via an interactive map with time and date filters.
- Book tickets via secure payment options (Easypaisa, SadaPay, etc.).
- Receive AI-based event recommendations.
- Save events to favorites and view personal event history.
- Provide feedback after attending events.

For Admins:

- Register new administrators.
- Manage and update user roles (organizers, attendees, and admins).
- Approve or delete events based on platform policies.
- Monitor all events and manage reported content.
- View and manage registered users.
- Update or remove inactive or suspicious accounts.
- Ensure system security and enforce platform guidelines.

For All Users:

- Secure signup/login process.
- Real-time notifications and reminders for events.
- After booking seat a receipt will be sent to the customer.

Non-Functional Requirements

- **Security:** Data encryption for user information and payments.
- **Scalability:** Ability to handle high traffic and multiple events simultaneously.
- **Usability:** User-friendly interface with smooth navigation.
- **Performance:** Fast loading times and efficient backend operations.
- **Reliability:** 99.9% uptime and minimal service interruptions.

Technologies and Tools

- **Backend:** PHP (Server-side scripting).
- **Database:** MySQL or SQLite (Relational Database Management System).
- **Development Environment:** XAMPP for local testing.
- **Frontend:** HTML, CSS, JavaScript (Bootstrap for UI enhancement).
- **AJAX:** For asynchronous operations such as chatbot and dynamic search.
- **Payment Integration:** Easypaisa, SadaPay, JazzCash.

Timeline and Milestones

Phase	Task	Expected Completion
Week 1	Research & Requirement Analysis + System Design & Prototyping	April 1, 2025
Week 2-4	Frontend Development & UI Integration	April 20, 2025
Week 4-5	Backend & Database Development	April 29, 2025

Week 6	AI and Chatbot Integration	May 5, 2025
Week 7	Testing & Debugging	May 11, 2025
Week 8-9	Final Deployment & Documentation	May 17, 2025

Expected Outcomes

- A fully functional event management platform with modern features.
- Improved accessibility and convenience for event organizers, attendees, and admins.
- Secure and seamless payment process for ticket booking.
- AI-powered recommendations for enhanced user experience.
- A basic chatbot for user assistance with event-related queries.
- Reliable and scalable system capable of handling multiple events.
- A successful demonstration of software development best practices.
